

What This Product Actually Is

It's three products fused into one:

1. Personal brand portfolio for the main physician (credentials, specializations, bio, gallery)
2. Multi-doctor appointment booking system (main doctor + invited colleagues)
3. Content/community platform (blog, videos, comments, reactions)

Functionality Review

A. Public-Facing Website (Portfolio)

- Home page with hero, doctor intro, featured services
- About page — education (academic credentials, Approbation, specializations), career timeline.
- Services / Treatment areas page
- Doctor listing page (main doctor + associated physicians)
- Individual doctor profile pages
- Contact page with map, opening hours, and practice address
- Legal pages: for Bangladesh
- Multi-language: Bangla + English minimum (international)

B. Appointment Booking System

Patient side:

- Browse doctors → pick service/treatment type → see available slots → book
- Guest booking vs registered patient account (decide early)
- Email + SMS confirmation (optional)
- Reschedule/cancel with a token-based link (no login required)
- Reminder notifications (24h before, 2h before)
- Insurance type selection (optional)

Doctor's side:

- Calendar view (day/week/month)
- Define working hours per weekday
- Block time off / vacation/breaks
- Define service types with duration + buffer time
- Override slots manually
- See patient notes attached to the appointment
- Mark appointment as completed/no-show
-

Admin side (main doctor/receptionist):

- Manage all doctors' calendars
- Create/invite new doctors
- Manually book on behalf of a patient (phone bookings still happen a lot)
- Reports: bookings per doctor, no-show rate, popular services

C. Blog / Content Platform / Like Facebook page

- Rich text editor with embedded images, videos (YouTube/Vimeo embed + native upload)
- Categories + tags
- Draft / scheduled/published states
- SEO fields (meta title, description, OG image, slug)
- Comments (threaded, with moderation queue — important, medical content attracts spam and bad-faith actors)
- Reactions (like/dislike, or emoji set)
- Share buttons
- Newsletter signup integration
- Reading time estimate, related posts

D. User Accounts

- Patient registration (optional but recommended for repeat bookings)
- Patient dashboard: upcoming appointments, past appointments, comments they've made
- Doctor accounts (invite-only)
- Admin role(s)
- Password reset, email verification, 2FA optional
